

50 ChatGPT Prompts for Freelance UX Designers

Prompt 1: Client Question Answering

Act as a freelance UX designer who has worked with a client on a website redesign project. The client asks for clarification on the user testing results. Explain the key findings and provide recommendations.

Context: The client has reviewed the user testing report but requires further explanation on the user pain points and design recommendations. Output format: Write a clear and concise response to the client's query.

Prompt 2: Design System Development

Act as a senior UX designer developing a design system for a large e-commerce company. Create a style guide for typography, color palette, and button styles. Provide examples and rationale for each section.

Context: The design team needs to create a consistent design language across the website and mobile app. Output format: A comprehensive design system style guide.

Prompt 3: User Flow Creation

Act as a UX designer working on a mobile banking app. Develop a detailed user flow for depositing a check using the app. Include wireframes, screenshots, and explanations.

Context: The product manager requires a clear understanding of the deposit process to improve the app's user experience. Output format: A clear and concise user flow document.

Prompt 4: Accessibility Review

Act as an accessibility consultant for a non-profit organization. Review a website's accessibility and provide recommendations for improvements. Focus on image alt-text, color contrast, and keyboard navigation.

Context: The website has received complaints from users with disabilities. Output format: A clear report outlining accessibility issues and suggested improvements.

Prompt 5: Stakeholder Management

Act as a project manager for a UX research project. Meet with stakeholders to discuss the project timeline, budget, and resource allocation. Summarize the key takeaways and action items.

Context: The stakeholders want to ensure the project stays on track and meets their expectations. Output format: A detailed meeting summary.

Prompt 6: Card Sorting Study

Act as a UX researcher conducting a card sorting study to understand user categorization of features on a software platform. Describe the methodology, data analysis, and key findings.

Context: The product team wants to improve the platform's navigation and organization. Output format: A technical report outlining the card sorting study's results.

Prompt 7: Usability Testing Report

Act as a research analyst interpreting usability testing results for a new e-commerce website. Summarize the key findings, identify areas for improvement, and provide recommendations.

Context: The product manager needs a clear understanding of the website's usability to inform design decisions. Output format: A comprehensive usability testing report.

Prompt 8: User Interview Script

Act as a UX researcher developing an interview script to gather user insights on their pain points with a subscription-based service. Create questions, expected responses, and a guide for note-taking.

Context: The product team wants to understand users' motivations and pain points to improve the service. Output format: A detailed interview script.

Prompt 9: Content Strategy Development

Act as a content strategist for a blog focused on UX design. Develop a content plan that covers topics, formats, and publication schedules. Include a content calendar and a list of suggested blog posts.

Context: The blog manager wants to increase engagement and authority in the UX design community. Output format: A comprehensive content strategy document.

Prompt 10: Design Systems Comparison

Act as a design systems architect comparing the design languages of three different e-commerce companies. Evaluate their strengths, weaknesses, and best practices. Provide recommendations for the company.

Context: The design team wants to develop a consistent design language and needs inspiration from other companies. Output format: A detailed comparison report.

Prompt 11: Human-Centered Design Approach

Act as a UX designer using the human-centered design approach to develop a product roadmap for a startup. Outline the key phases, activities, and deliverables.

Context: The founding team wants to ensure their product development process prioritizes user needs. Output format: A clear product roadmap document.

Prompt 12: User Feedback Analysis

Act as a product analyst analyzing user feedback from a product launch to identify areas for improvement. Provide recommendations for changes to improve user satisfaction.

Context: The product manager needs a clear understanding of user opinions to inform design decisions. Output format: A comprehensive user feedback analysis report.

Prompt 13: A/B Testing Strategy

Act as a data analyst developing an A/B testing strategy to compare two versions of a website's CTA button. Outline the hypotheses, metrics, and expected outcomes.

Context: The product manager wants to improve the website's conversion rates and needs data-driven insights. Output format: A clear A/B testing plan document.

Prompt 14: UX Design Team Onboarding

Act as a design team lead onboarding new team members to the company's design language and processes. Develop an onboarding plan that includes training materials, tools, and best practices.

Context: The company has experienced rapid growth and needs to ensure all team members are equipped to deliver high-quality designs. Output format: A comprehensive onboarding plan document.

Prompt 15: User Research Ethics

Act as an ethics consultant advising a UX research team on the best practices for conducting research with vulnerable populations. Provide recommendations for informed consent, data protection, and cultural sensitivity.

Context: The research team wants to ensure their work respects users' rights and dignity. Output format: A clear ethics guide document.

Prompt 16: Design Thinking Workshop

Act as a facilitator leading a design thinking workshop for a team of developers. Outline the agenda, activities, and expected outcomes to help the team develop a human-centered mindset.

Context: The development team wants to incorporate design thinking into their process but requires guidance. Output format: A clear workshop agenda and facilitator's notes.

Prompt 17: Usability Testing Protocol

Act as a research analyst developing a usability testing protocol for a software application. Outline the participant recruitment, testing procedure, and data analysis plan.

Context: The product manager wants to ensure usability testing is conducted scientifically to inform design decisions. Output format: A detailed usability testing protocol document.

Prompt 18: Information Architecture Review

Act as an information architect reviewing the website's information architecture and providing recommendations for improvements. Focus on site navigation, search functionality, and content organization.

Context: The product manager wants to improve the website's user experience and needs expert insights. Output format: A clear information architecture review document.

Prompt 19: Accessibility Guidelines

Act as a consultant providing accessibility guidelines for a company's intranet. Outline the best practices for creating accessible content, forms, and navigation.

Context: The company wants to ensure its internal tools are accessible to all employees. Output format: A comprehensive accessibility guide document.

Prompt 20: User Journey Mapping

Act as a UX designer creating a user journey map for a customer service chatbot. Develop a visual representation of the user's interactions and pain points.

Context: The product team wants to improve the chatbot's user experience and needs a clear understanding of user behavior. Output format: A clear user journey map document.

Prompt 21: Design Principles Development

Act as a design leader developing design principles for a software company. Outline the key principles, definitions, and rationale.

Context: The design team wants to create a consistent design language but lacks clear principles. Output format: A comprehensive design principles document.

Prompt 22: User Research Budgeting

Act as a research manager developing a budget for a UX research project. Outline the costs for participant recruitment, researcher time, and data analysis tools.

Context: The product manager wants to ensure the research project is adequately funded. Output format: A detailed budget document.

Prompt 23: Design Vision Statement

Act as a design leader crafting a design vision statement for a company. Develop a clear and concise statement that outlines the company's design goals and values.

Context: The company wants to create a shared understanding of its design direction. Output format: A clear design vision statement.

Prompt 24: UX Design Portfolio Optimization

Act as a design career coach optimizing a UX designer's portfolio for maximum impact. Provide recommendations for structure, content, and presentation.

Context: The UX designer wants to stand out in the job market and needs expert guidance. Output format: A comprehensive portfolio optimization plan.

Prompt 25: User Empathy Development

Act as a UX researcher guiding a team of researchers in developing empathy for users. Outline activities, tools, and best practices for fostering empathy and understanding.

Context: The research team wants to ensure their user research is grounded in empathy but may lack experience. Output format: A clear empathy development plan document.

Prompt 26: Design System Governance

Act as a design systems architect establishing design system governance for a company. Outline roles, responsibilities, and tools for maintaining the design system.

Context: The design team wants to ensure the design system is well-maintained and consistent. Output format: A comprehensive design system governance document.

Prompt 27: UX Design Team Communication

Act as a design team lead developing a communication plan for the UX design team. Outline key stakeholders, communication channels, and messaging guidelines.

Context: The company wants to ensure effective communication between teams but lacks a clear plan. Output format: A clear communication plan document.

Prompt 28: Customer Journey Mapping

Act as a UX designer creating a customer journey map for a retail company. Develop a visual representation of the customer's interactions and pain points.

Context: The product team wants to improve the customer experience and needs a clear understanding of user behavior. Output format: A clear customer journey map document.

Prompt 29: Design Ethics and Bias

Act as a design ethics consultant advising a UX team on how to avoid bias in their design decisions. Provide recommendations for inclusive design, cultural sensitivity, and accessible design.

Context: The UX team wants to ensure their designs are inclusive and respectful but may lack expertise. Output format: A clear design ethics guide document.

Prompt 30: Researcher-Developer Collaboration

Act as a facilitator guiding a research team and developer team in collaborating effectively. Outline activities, tools, and best practices for fostering collaboration.

Context: The company wants to improve collaboration between teams but lacks a clear plan. Output format: A clear collaboration plan document.

Prompt 31: Design Review Process

Act as a design team lead establishing a design review process for the UX design team. Outline key stakeholders, review criteria, and feedback guidelines.

Context: The design team wants to ensure high-quality designs but lacks a clear review process. Output format: A clear design review process document.

Prompt 32: Usability Testing Recruitment

Act as a research analyst developing a recruitment plan for usability testing participants. Outline strategies for finding diverse participants, managing participant flow, and ensuring participant consent.

Context: The product manager wants to ensure usability testing is conducted scientifically but may lack experience. Output format: A detailed recruitment plan document.

Prompt 33: Customer Avatar Development

Act as a UX researcher developing a customer avatar for a new product. Outline the key characteristics, behaviors, and pain points of the target user.

Context: The product team wants to develop a product that meets user needs but lacks a clear understanding of the target user. Output format: A clear customer avatar document.

Prompt 34: Content Strategy for UX Writing

Act as a content strategist developing a content strategy for UX writing. Outline the key principles, formats, and publication schedules for UX writing projects.

Context: The UX team wants to ensure high-quality UX writing but may lack a clear strategy. Output format: A clear content strategy document.

Prompt 35: Information Architecture for Complex Products

Act as an information architect developing an information architecture for a complex software product. Outline key principles, navigation patterns, and content organization strategies.

Context: The product team wants to improve the product's user experience and needs expert insights. Output format: A comprehensive information architecture document.

Prompt 36: Accessibility Testing Plan

Act as a quality assurance specialist developing an accessibility testing plan for a software application. Outline key testing activities, tools, and expected outcomes.

Context: The product manager wants to ensure the product is accessible to all users but may lack experience. Output format: A clear accessibility testing plan document.

Prompt 37: Designing for Mental Health

Act as a UX designer developing a product that supports mental health. Outline key considerations, design principles, and strategies for creating a user-centered experience.

Context: The product team wants to develop a product that promotes user well-being but may lack expertise. Output format: A clear design guide document.

Prompt 38: Researcher Communication Skills

Act as a research leader developing communication skills for UX researchers. Outline key principles, best practices, and tools for effective communication.

Context: The UX team wants to ensure effective communication with stakeholders but may lack expertise. Output format: A clear communication skills guide document.

Prompt 39: Designing for Older Adults

Act as a UX designer developing a product that caters to older adults. Outline key considerations, design principles, and strategies for creating an inclusive experience.

Context: The product team wants to develop a product that supports older adults but may lack expertise. Output format: A clear design guide document.

Prompt 40: Human-Centered Design for Complex Systems

Act as a design leader applying human-centered design principles to complex systems. Outline key considerations, design principles, and strategies for creating user-centered experiences.

Context: The company wants to develop products that address complex system needs but may lack expertise. Output format: A clear design guide document.

Prompt 41: User Research Proposal Development

Act as a research manager developing a user research proposal for a project. Outline key research objectives, methods, and expected outcomes.

Context: The product manager wants to ensure the research project is well-funded and meets user needs but may lack experience. Output format: A clear proposal document.

Prompt 42: Design Systems Implementation

Act as a design systems architect implementing a design system for a company. Outline key steps, tools, and expected outcomes for a successful implementation.

Context: The design team wants to ensure the design system is well-maintained and consistent but may lack experience. Output format: A clear implementation plan document.

Prompt 43: Design Thinking for Business Strategy

Act as a design leader applying design thinking principles to business strategy. Outline key considerations, design principles, and strategies for creating user-centered business solutions.

Context: The company wants to develop business strategies that prioritize user needs but may lack expertise. Output format: A clear design guide document.

Prompt 44: UX Writing for Technical Content

Act as a UX writer developing UX writing for technical content. Outline key principles, formats, and publication schedules for UX writing projects.

Context: The UX team wants to ensure high-quality UX writing but may lack a clear strategy. Output format: A clear content strategy document.

Prompt 45: Information Architecture for Web Applications

Act as an information architect developing an information architecture for a web application. Outline key principles, navigation patterns, and content organization strategies.

Context: The product team wants to improve the application's user experience and needs expert insights. Output format: A comprehensive information architecture document.

Prompt 46: Accessibility for Small Budgets

Act as a consultant providing accessibility guidelines for small budgets. Outline key principles, cost-effective strategies, and tools for improving accessibility.

Context: The company wants to improve accessibility but has limited budget resources. Output format: A clear guide document.

Prompt 47: Designing for Virtual Reality

Act as a UX designer developing a product that utilizes virtual reality. Outline key considerations, design principles, and strategies for creating an immersive experience.

Context: The product team wants to develop a product that showcases VR capabilities but may lack expertise. Output format: A clear design guide document.

Prompt 48: A/B Testing for UX Designers

Act as a data analyst developing an A/B testing plan for UX designers. Outline key hypotheses, metrics, and expected outcomes.

Context: The UX team wants to improve user experience through data-driven insights but may lack experience. Output format: A clear A/B testing plan document.

Prompt 49: Information Architecture for E-commerce

Act as an information architect developing an information architecture for an e-commerce website. Outline key principles, navigation patterns, and content organization strategies.

Context: The product team wants to improve the website's user experience and needs expert insights. Output format: A comprehensive information architecture document.

Prompt 50: Customer Journey Mapping for Service Design

Act as a UX designer creating a customer journey map for a service design project. Develop a visual representation of the customer's interactions and pain points.

Context: The product team wants to improve the customer experience and needs a clear understanding of user behavior. Output format: A clear customer journey map document.
